Full-stack engineer with a Master's in Finance and hands-on experience building production payment systems, distributed architectures, and enterprise data pipelines. Built and operates Aurora — a complete apartment ERP with Stripe payments, GraphQL API, real-time WebSockets, and a full observability stack — solo in 7 months. Onboarded first paying client — processed real Stripe transactions in production, end-to-end from booking to payout. Previously data engineer at Royal Caribbean (Silversea Cruises). Fluent in 5 languages.

PRODUCTION SYSTEM

Aurora — Full-Stack Apartment ERP & Booking Platform

Nov 2025 — Present

Revenue Generating · [Production Link](#) [aurora-apartment-skrbin.hr](#) **LIVE**

[aurora-apartment-skrbin.hr/admin](#) **DEMO ADMIN**

- Architected and shipped a **multi-tenant SaaS platform** across 3 decoupled apps (guest portal, admin dashboard, Spring Boot API) deployed on Hetzner VPS behind Cloudflare
- Built **end-to-end Stripe payment flows** — deposits, full payments, automated refunds, owner payouts, and idempotent webhook handling with real-time admin notifications and commission tracking auto-linked to expenses affecting profit reporting
- Implemented **event-driven real-time layer** via GraphQL subscriptions and WebSockets — cross-system events from guest bookings, Stripe webhooks, chat messages pushed instantly to admin sessions, and all CRUD operations performed on the dashboard, ensuring synchronization and auditability
- Designed **multi-dimensional seasonal pricing engine** with multi-currency support, precise conversion and rounding logic
- Automated mission-critical business logic via **CRON** scheduler — balance reminders, reservation expiry, and overdue alerts delegating cancellation decisions to the owner rather than automating them
- Built end-to-end **guest review system** — multi-step form with ratings and consent flow, post-checkout farewell email triggering review requests, and admin moderation with publish/unpublish; live reviews fed into a homepage testimonial carousel
- Secured platform with **OAuth2 Google SSO, TOTP 2FA, role-based access control**, and session-based auth
- Built full **CI/CD pipeline** with GitHub Actions — 3 parallel build jobs, Docker Hub registry with git SHA versioning, automated SSH deployment to VPS, zero-downtime container recreation
- Deployed behind **Nginx reverse proxy** with full Dev/Prod environment isolation
- Instrumented **production observability stack** — Prometheus, Grafana, cAdvisor, Node Exporter, Pushgateway
- **GDPR compliant** — Axeptio consent manager with Google Consent Mode v2, all analytics defaulting to denied until explicit user consent
- Isolated demo environment email traffic behind **Mailpit** — sandboxed inbox replacing live Gmail relay for security while preserving full transactional email visibility for demo users
- Internationalised across **13 languages** with full i18n architecture
- Validated under production load via **k6 stress testing** — 4 concurrent scenarios (guest, admin, review, contact), 63 VUs over 9 minutes against live infrastructure; admin p95 505ms, review p95 327ms, contact p95 457ms, 0% error rate across all scenarios
- Written **~2,000 lines of integration tests** across 8 test classes — reservation logic, payment state machine, Stripe webhook idempotency, seasonal pricing engine, and async CRON schedulers, guest review system, guest CRUD and presence, and expense filtering and aggregates

IT EXPERIENCE

Data Engineer

Dec 2024 — Dec 2025

Silversea Cruises · Royal Caribbean Group / Digit ValueMonaco

—

Assisted in migration of legacy systems to **Databricks** with Medallion architecture (Bronze / Silver / Gold) for a Fortune 500 cruise line

—

Automated data pipeline jobs via **Azure DevOps**, ensuring reliable continuous data flows

—

Optimised complex SQL queries for high-volume extraction and transformation from heterogeneous sources

—

Delivered high-fidelity datasets for BI reporting and advanced analytics across multiple business units

FINANCE EXPERIENCE

Junior Web Developer

May 2023 — Jan 2024

IstrabilityCroatia

—

Developed full-stack applications using **MERN/MEAN** stack with responsive UI and integrated authentication

—

Optimised front-end performance and debugging processes under Agile/Sprint methodology

Accountant

July 2024 — Nov 2024

Belardi Food GroupMonaco

—

Managed full-cycle accounting, bank and third-party reconciliations, VAT returns, treasury for international transactions (purchases, sales and payments), monitored cash, investments and loans

SKILLS

Operations Manager & Tax Advisor

Nov 2022 — Apr 2023

SOS YachtingNice, France

—

Advised on French and international tax strategy; delivered fiscal training programs; defined commercial strategy
